No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                      US-09-270-437D-5

-! FUNCTION: Produced by lymphocytes activated by specific antigens.
-cr mitogens. IFN-gamma, in addition to having antiviral activity, has important immunoregulatory functions. It is a potent activator of macrophages, it has antiproliferative effects on transformed cells and it can potentiate the antiviral and antitumor effects of the type I interferons (By similarity).

Biochem. Biophys. Res. Commun. 272:576-582(2000).
-!- FUNCTION: Orphan receptor.
-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).
-!- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S5 DRBM.

GG -> PP (IN REF. 3).

K -> R (IN REF. 3).

peptide (614-626), is correlated with peptide structure.";
FEBS Lett. 379-278-278(1996).
-I-FUNCTION: Secretogranin I is a neuroendocrine secretory granule protein, which may be the precursor for other biologically active peptides. The 16 pairs of basic AA distributed throughout its sequence may be used as proteolytic cleavage sites.
-I-FUNCTION: Secretolytin has antibacterial activity.
-I-SUBCELBULAR LOCATION: Neuroendocrine and endocrine secretory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          TISSUE=Addenal chromaffin;

"Molecular analysis of the DNA gyrB gene from Myxococcus xanthus.";
Microbiology 144:1647(1998).

-!- FUNCTION: DNA gyrase negatively supercoils closed circular double-stranded DNA in an ATP-dependent manner and also catalyzes the interconversion of other topological isomers of double-stranded DNA rings, including catenanes and knotted rings.
-!- CATALYTIC ACTIVITY: ATP-dependent breakage, passage and rejoining of double-stranded DNA.
-!- GAUBUNIT: Made up of two chains. The A chain is responsible for DNA breakage and rejoining, the B chain catalyzes ATP hydrolysis. The enzyme forms an AZB2 tetramer.
-!- SIMILARITY: Belongs to the type II topoisomerase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mycoplasma pneumoniae.

Patent No. US20020115139A1
GENERAL INFORMATION:
APPLICANT: Kalos, Michael D.
APPLICANT: Retter, Marc W.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY
TITLE OF INVENTION: AND DIAGNOSIS OF LUNG CANCER
FILE REFERENCE: 210121.455C15
                                                                                                                                                                                             CTGGCTGCTGTAGGTCTTTTCCCAGCTTCATCCAGCGCAGTCCCGCCG-

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
